

Straighten Your Teeth Without Anyone Knowing

American Association of
Orthodontists

Dr. Mandana Mozayani is a Comprehensive Orthodontic Specialist of children and adults. She offers the highest quality, state-of-the-art technology and materials available today.

After completing her dental degree from the Case Western Reserve University (CWRU) Dental School, she graduated from the CWRU Orthodontic Program with a Master's Degree in First Phase of Orthodontic Treatment.

Dr. Mandana has written several joint publications in bio-medical research and Orthodontics. And she is a member of numerous dental and Orthodontic organizations.

She is fluent in English, Persian, French and German and enjoys sharing activities and interests with her daughter, Taraneh.

What is Invisalign?

It's the virtually invisible way to straighten teeth without braces.

How does Invisalign work?

Invisalign uses a series of clear, removable aligners to gradually move teeth over time to give you the smile you deserve. Each aligner moves teeth incrementally and is worn for about two weeks, then replaced by the next in the series until the final position is achieved.

Primary benefits – Invisalign is:

- Clear - No one knows.
- Removable - You can eat, drink, brush and floss normally.
- Comfortable - No metal brackets or wires.
- Computer Generated – See how your straight teeth will look.

Will it fit my life?

Invisalign is the best way to transform your smile without interfering with your day-to-

day life. Aligners are clear and removable. They are virtually invisible when worn, so no one knows. And the ability to remove them allows for normal eating and dental hygiene.

Will it work for me?

Today, with the application of computer technology and custom manufacturing, Invisalign treats a broader range of cases with greater precision. Learn more about the problems Invisalign can help solve. Request a FREE complementary exam and assessment.
